Academic Council 11/05/2017 <u>Item No: 4.286</u>

UNIVERSITY OF MUMBAI

Syllabus for S.Y.B.Sc.

Programme: B.Sc.

Course: Information Technology

with effect from the academic year 2017-2018

Semester – 3				
Course Code	Course Type	Course Title	Credits	
USIT301	Skill Enhancement Course	Python Programming	2	
USIT302	Core Subject	Data Structures	2	
USIT303	Core Subject	Computer Networks	2	
USIT304	Core Subject	Database Management Systems	2	
USIT305	Core Subject	Applied Mathematics	2	
USIT3P1	Skill Enhancement Course	Python Programming Practical	2	
	Practical			
USIT3P2	Core Subject Practical	Data Structures Practical	2	
USIT3P3	Core Subject Practical	Computer Networks Practical	2	
USIT3P4	Core Subject Practical	Database Management Systems	2	
		Practical		
USIT3P5	Core Subject Practical	Mobile Programming Practical	2	
		Total Credits	20	

Semester – 4				
Course Code	Course Type	Course Title	Credits	
USIT401	Skill Enhancement Course	Core Java	2	
USIT402	Core Subject	Introduction to Embedded Systems	2	
USIT403	Core Subject	Computer Oriented Statistical Techniques	2	
USIT404	Core Subject	Software Engineering	2	
USIT405	Core Subject	Computer Graphics and Animation	2	
USIT4P1	Skill Enhancement Course Practical	Core Java Practical	2	
USIT4P2	Core Subject Practical	Introduction to Embedded Systems Practical	2	
USIT4P3	Core Subject Practical	Computer Oriented Statistical Techniques Practical	2	
USIT4P4	Core Subject Practical	Software Engineering Practical	2	
USIT4P5	Core Subject Practical	Computer Graphics and Animation Practical	2	
Total Credits				

SEMESTER III

B. Sc. (Information Technology)		Semester – III	
Course Name: Python Programming		Course Code: USIT301	
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System	Theory Examination	21/2	75
	Internal		25

Unit	Details	Lectures
Ι	Introduction: The Python Programming Language, History, features,	
	Installing Python, Running Python program, Debugging: Syntax	
	Errors, Runtime Errors, Semantic Errors, Experimental Debugging,	
	Formal and Natural Languages, The Difference Between Brackets,	
	Braces, and Parentheses,	
	Variables and Expressions Values and Types, Variables, Variable	12
	Names and Keywords, Type conversion, Operators and Operands,	
	Expressions, Interactive Mode and Script Mode, Order of Operations.	
	Conditional Statements: if, if-else, nested if –else	
	Looping : for, while, nested loops	
	Control statements: Terminating loops, skipping specific conditions	
II	Functions: Function Calls, Type Conversion Functions, Math	
	Functions, Composition, Adding New Functions, Definitions and Uses,	
	Flow of Execution, Parameters and Arguments, Variables and	
	Parameters Are Local, Stack Diagrams, Fruitful Functions and Void	
	Functions, Why Functions? Importing with from, Return Values,	
	Incremental Development, Composition, Boolean Functions, More	12
	Recursion, Leap of Faith, Checking Types	
	Strings: A String Is a Sequence, Traversal with a for Loop, String	
	Slices, Strings Are Immutable, Searching, Looping and Counting,	
	String Methods, The in Operator, String Comparison, String	
	Operations.	
III	Lists: Values and Accessing Elements, Lists are mutable, traversing a	
	List, Deleting elements from List, Built-in List Operators,	
	Concatenation, Repetition, In Operator, Built-in List functions and	
	methods	
	Tuples and Dictionaries: Tuples, Accessing values in Tuples, Tuple	
	Assignment, Tuples as return values, Variable-length argument tuples,	
	Basic tuples operations, Concatenation, Repetition, in Operator,	12
	Iteration, Built-in Tuple Functions	
	Creating a Dictionary, Accessing Values in a dictionary, Updating	
	Dictionary, Deleting Elements from Dictionary, Properties of	
	Dictionary keys, Operations in Dictionary, Built-In Dictionary	
	Functions, Built-in Dictionary Methods	
	Files: Text Files, The File Object Attributes, Directories	

	-	
	Exceptions: Built-in Exceptions, Handling Exceptions, Exception with	
	Arguments, User-defined Exceptions	
IV	Regular Expressions – Concept of regular expression, various types of regular expressions, using match function. Classes and Objects: Overview of OOP (Object Oriented Programming), Class Definition, Creating Objects, Instances as Arguments, Instances as return values, Built-in Class Attributes, Inheritance, Method Overriding, Data Encapsulation, Data Hiding Multithreaded Programming: Thread Module, creating a thread, synchronizing threads, multithreaded priority queue Modules: Importing module, Creating and exploring modules, Math module, Random module, Time module	12
V	Creating the GUI Form and Adding Widgets: Widgets: Button, Canvas, Checkbutton, Entry, Frame, Label, Listbox, Menubutton, Menu, Message, Radiobutton, Scale, Scrollbar, text, Toplevel, Spinbox, PanedWindow, LabelFrame, tkMessagebox. Handling Standard attributes and Properties of Widgets. Layout Management: Designing GUI applications with proper Layout Management features. Look and Feel Customization: Enhancing Look and Feel of GUI using different appearances of widgets. Storing Data in Our MySQL Database via Our GUI: Connecting to a MySQL database from Python, Configuring the MySQL connection, Designing the Python GUI database, Using the INSERT command, Using the UPDATE command, Using the DELETE command, Storing and retrieving data from MySQL database.	12

B. Sc. (Information Technology)		Semester – III	
Course Name: Data Structures		Course Code: USIT302	
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System	Theory Examination	21/2	75
	Internal		25

Unit	Details	Lectures
I	Introduction: Data and Information, Data Structure, Classification of Data Structures, Primitive Data Types, Abstract Data Types, Data structure vs. File Organization, Operations on Data Structure, Algorithm, Importance of Algorithm Analysis, Complexity of an Algorithm, Asymptotic Analysis and Notations, Big O Notation, Big Omega Notation, Big Theta Notation, Rate of Growth and Big O Notation. Array: Introduction, One Dimensional Array, Memory Representation of One Dimensional Array, Traversing, Insertion, Deletion, Searching, Sorting, Merging of Arrays, Multidimensional Arrays, Memory Representation of Two Dimensional Arrays, General Multi-Dimensional Arrays, Sparse Arrays, Sparse Matrix, Memory Representation of Special kind of Matrices, Advantages and Limitations of Arrays.	12
II	Linked List: Linked List, One-way Linked List, Traversal of Linked List, Searching, Memory Allocation and De-allocation, Insertion in Linked List, Deletion from Linked List, Copying a List into Other List, Merging Two Linked Lists, Splitting a List into Two Lists, Reversing One way linked List, Circular Linked List, Applications of Circular Linked List, Two way Linked List, Traversing a Two way Linked List, Searching in a Two way linked List, Insertion of an element in Two way Linked List, Deleting a node from Two way Linked List, Header Linked List, Applications of the Linked list, Representation of Polynomials, Storage of Sparse Arrays, Implementing other Data Structures.	12
III	Stack: Introduction, Operations on the Stack Memory Representation of Stack, Array Representation of Stack, Applications of Stack, Evaluation of Arithmetic Expression, Matching Parenthesis, infix and postfix operations, Recursion. Queue: Introduction, Queue, Operations on the Queue, Memory Representation of Queue, Array representation of queue, Linked List Representation of Queue, Circular Queue, Some special kinds of queues, Deque, Priority Queue, Application of Priority Queue, Applications of Queues.	12

IV	Sorting and Searching Techniques	
	Bubble, Selection, Insertion, Merge Sort. Searching: Sequential,	
	Binary, Indexed Sequential Searches, Binary Search.	
	Tree: Tree, Binary Tree, Properties of Binary Tree, Memory	
	Representation of Binary Tree, Operations Performed on Binary Tree,	
	Reconstruction of Binary Tree from its Traversals, Huffman Algorithm,	12
	Binary Search Tree, Operations on Binary Search Tree, Heap, Memory	
	Representation of Heap, Operation on Heap, Heap Sort.	
	Advanced Tree Structures: Red Black Tree, Operations Performed	
	on Red Black Tree, AVL Tree, Operations performed on AVL Tree, 2-	
	3 Tree, B-Tree.	
\mathbf{V}	Hashing Techniques	
	Hash function, Address calculation techniques, Common hashing	
	functions Collision resolution, Linear probing, Quadratic, Double	
	hashing, Bucket hashing, Deletion and rehashing	
	Graph: Introduction, Graph, Graph Terminology, Memory	12
	Representation of Graph, Adjacency Matrix Representation of Graph,	
	Adjacency List or Linked Representation of Graph, Operations	
	Performed on Graph, Graph Traversal, Applications of the Graph,	
	Reachability, Shortest Path Problems, Spanning Trees.

B. Sc. (Information Technology)		Semester – III	
Course Name: Computer Networks		Course Code: USIT303	
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System	Theory Examination	21/2	75
	Internal		25

Unit	Details	Lectures
I	Introduction: Data communications, networks, network types, Internet	
	history, standards and administration.	
	Network Models: Protocol layering, TCP/IP protocol suite, The OSI	
	model.	
	Introduction to Physical layer: Data and signals, periodic analog	12
	signals, digital signals, transmission impairment, data rate limits,	
	performance.	
	Digital and Analog transmission: Digital-to-digital conversion,	
	analog-to-digital conversion, transmission modes, digital-to-analog	
	conversion, analog-to-analog conversion.	
II	Bandwidth Utilization: Multiplexing and Spectrum Spreading:	
	Multiplexing, Spread Spectrum	
	Transmission media: Guided Media, Unguided Media	
	Switching: Introduction, circuit switched networks, packet switching,	12
	structure of a switch.	12
	Introduction to the Data Link Layer: Link layer addressing, Data Link Layer Design Issues, Error detection and correction, block coding,	
	cyclic codes, checksum, forward error correction, error correcting codes, error detecting codes.	
III	Data Link Control: DLC services, data link layer protocols, HDLC,	
1111	Point-to-point protocol.	
	Media Access Control: Random access, controlled access,	
	channelization, Wired LANs – Ethernet Protocol, standard ethernet,	
	fast ethernet, gigabit ethernet, 10 gigabit ethernet,	12
	Wireless LANs: Introduction, IEEE 802.11 project, Bluetooth,	
	WiMAX, Cellular telephony, Satellite networks.	
	Connecting devices and Virtual LANs.	
IV	Introduction to the Network Layer: Network layer services, packet	
	switching, network layer performance, IPv4 addressing, forwarding of	
	IP packets, Internet Protocol, ICMPv4, Mobile IP	
	Unicast Routing: Introduction, routing algorithms, unicast routing	12
	protocols.	
	Next generation IP: IPv6 addressing, IPv6 protocol, ICMPv6 protocol,	
	transition from IPv4 to IPv6.	
V	Introduction to the Transport Layer: Introduction, Transport layer	12
	protocols (Simple protocol, Stop-and-wait protocol, Go-Back-n	14

protocol, Selective repeat protocol, Bidirectional protocols), Transport	
layer services, User datagram protocol, Transmission control protocol,	
Standard Client0Server Protocols: World wide-web and HTTP, FTP,	
Electronic mail, Telnet, Secured Shell, Domain name system.

B. Sc. (Information Technology)		Semester – III	
Course Name: Database Management Systems		Course Code: USIT304	
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System	Theory Examination	21/2	75
	Internal		25

Unit	Details	Lectures
I	Introduction to Databases and Transactions	
	What is database system, purpose of database system, view of data,	
	relational databases, database architecture, transaction management	
	Data Models	
	The importance of data models, Basic building blocks, Business rules,	12
	The evolution of data models, Degrees of data abstraction.	
	Database Design, ER Diagram and Unified Modeling Language	
	Database design and ER Model: overview, ER Model, Constraints, ER	
	Diagrams, ERD Issues, weak entity sets, Codd's rules, Relational	
II	Schemas, Introduction to UML Relational database model:	
111	Logical view of data, keys, integrity rules, Relational Database design:	
	features of good relational database design, atomic domain and	
	Normalization (1NF, 2NF, 3NF, BCNF).	
	Relational Algebra and Calculus	
	Relational algebra: introduction, Selection and projection, set	12
	operations, renaming, Joins, Division, syntax, semantics. Operators,	
	grouping and ungrouping, relational comparison.	
	Calculus: Tuple relational calculus, Domain relational Calculus,	
	calculus vs algebra, computational capabilities	
III	Constraints, Views and SQL	
	Constraints, types of constrains, Integrity constraints, Views:	
	Introduction to views, data independence, security, updates on views,	12
	comparison between tables and views SQL: data definition, aggregate	
	function, Null Values, nested sub queries, Joined relations. Triggers.	
IV	Transaction management and Concurrency	
	Control Transaction management: ACID properties, serializability and	10
	concurrency control, Lock based concurrency control (2PL,	12
	Deadlocks), Time stamping methods, optimistic methods, database	
V	recovery management. PL-SQL: Beginning with PL / SQL, Identifiers and Keywords,	
•	Operators, Expressions, Sequences, Control Structures, Cursors and	
	Transaction, Collections and composite data types, Procedures and	12
	Functions, Exceptions Handling, Packages, With Clause and	
	Hierarchical Retrieval, Triggers.

Course Name: Applied Mathematics		Course Code: USIT305	
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System	Theory Examination	21/2	75
	Internal		25

Unit	Details	Lectures
I	Matrices: Inverse of a matrix, Properties of matrices, Elementary	
	Transformation, Rank of Matrix, Echelon or Normal Matrix, Inverse of	
	matrix, Linear equations, Linear dependence and linear independence of vectors, Linear transformation, Characteristics roots and	
	characteristics vectors, Properties of characteristic vectors, Caley-	
	Hamilton Theorem, Similarity of matrices, Reduction of matrix to a	
	diagonal matrix which has elements as characteristics values.	
	Complex Numbers: Complex number, Equality of complex numbers,	
	Graphical representation of complex number (Argand's Diagram), Polar	12
	form of complex numbers, Polar form of x+iy for different signs of x,y,	12
	Exponential form of complex numbers, Mathematical operation with	
	complex numbers and their representation on Argand's Diagram,	
	Circular functions of complex angles, Definition of hyperbolic	
	function, Relations between circular and hyperbolic functions, Inverse	
	hyperbolic functions, Differentiation and Integration, Graphs of the	
	hyperbolic functions, Logarithms of complex quality, j(=i)as an	
	operator(Electrical circuits)	
II	Equation of the first order and of the first degree: Separation of	
	variables, Equations homogeneous in x and y, Non-homogeneous linear	
	equations, Exact differential Equation, Integrating Factor, Linear	
	Equation and equation reducible to this form, Method of substitution.	
	Differential equation of the first order of a degree higher than the	
	first: Introduction, Solvable for p (or the method of factors), Solve for	
	y, Solve for x, Clairaut's form of the equation, Methods of Substitution,	
	Method of Substitution.	12
	Linear Differential Equations with Constant Coefficients: Introduction, The Differential Operator, Linear Differential Equation	12
	f(D) y = 0, Different cases depending on the nature of the root of the	
	equation $f(D) = 0$, Linear differential equation $f(D) = X$, The	
	complimentary Function, The inverse operator $1/f(D)$ and the symbolic	
	expiration for the particular integral 1/f(D) X; the general methods,	
	Particular integral : Short methods, Particular integral : Other methods,	
	Differential equations reducible to the linear differential equations with	
	constant coefficients.	
III	The Laplace Transform: Introduction, Definition of the Laplace	
	Transform, Table of Elementary Laplace Transforms, Theorems on	12
	Important Properties of Laplace Transformation, First Shifting	

	Theorem, Second Shifting Theorem, The Convolution Theorem,				
	Laplace Transform of an Integral, Laplace Transform of Derivatives,				
	Inverse Laplace Transform: Shifting Theorem, Partial fraction				
	Methods, Use of Convolution Theorem, Solution of Ordinary Linear				
	Differential Equations with Constant Coefficients, Solution of				
	Simultaneous Ordinary Differential Equations, Laplace Transformation				
	of Special Function, Periodic Functions, Heaviside Unit Step Function,				
	Dirac-delta Function(Unit Impulse Function),				
IV	Multiple Integrals: Double Integral, Change of the order of the				
	integration, Double integral in polar co-ordinates, Triple integrals.	12			
	Applications of integration: Areas, Volumes of solids.				
V					
	Duplication formula. Differentiation Under the Integral Sign				
	Error Functions

B. Sc. (Information Technology)		Semester – III	
Course Name: Python Programming Practical		Course Code: USIT3P1	
Periods per week (1 Period is 50 minutes)		3	
Credits		2	
		Hours	Marks
Evaluation System	Practical Examination	21/2	50
	Internal		

List of l	List of Practical		
1.	Write the program for the following:		
a.	Create a program that asks the user to enter their name and their age. Print out a		
	message addressed to them that tells them the year that they will turn 100 years		
	old.		
b.	Enter the number from the user and depending on whether the number is even or		
	odd, print out an appropriate message to the user.		
c.	Write a program to generate the Fibonacci series.		
d.	Write a function that reverses the user defined value.		
e.	Write a function to check the input value is Armstrong and also write the		
	function for Palindrome.		
f.	Write a recursive function to print the factorial for a given number.		
2.	Write the program for the following:		
a.	Write a function that takes a character (i.e. a string of length 1) and returns True		
	if it is a vowel, False otherwise.		
b.	Define a function that computes the <i>length</i> of a given list or string.		
c.	Define a procedure histogram() that takes a list of integers and prints a		
	histogram to the screen. For example, histogram ([4, 9, 7]) should print the		
	following:		

	******* ******		
3.	Write the program for the following:		
a.	A pangram is a sentence that contains all the letters of the English alphabet at least		
.	once, for example: The quick brown fox jumps over the lazy dog. Your task here		
	is to write a function to check a sentence to see if it is a pangram or not.		
b.	Take a list, say for example this one:		
	- mas a area, any con area-pro mas area.		
	a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]		
	and write a program that prints out all the elements of the list that are less than 5.		
4.	Write the program for the following:		

Write a program that takes two lists and returns True if they have at least one common member. Write a Python program to print a specified list after removing the 0th, 2nd, 4th b. and 5th elements. Write a Python program to clone or copy a list c. Write the program for the following: 5. Write a Python script to sort (ascending and descending) a dictionary by value. Write a Python script to concatenate following dictionaries to create a new one. Sample Dictionary: $dic1=\{1:10, 2:20\}$ $dic2={3:30, 4:40}$ dic3={5:50,6:60} Expected Result : {1: 10, 2: 20, 3: 30, 4: 40, 5: 50, 6: 60} Write a Python program to sum all the items in a dictionary. Write the program for the following: 6. Write a Python program to read an entire text file. a. Write a Python program to append text to a file and display the text. b. Write a Python program to read last n lines of a file. 7. Write the program for the following: Design a class that store the information of student and display the same a. b. Implement the concept of inheritance using python Create a class called Numbers, which has a single class attribute called MULTIPLIER, and a constructor which takes the parameters x and y (these should all be numbers). i. Write a method called add which returns the sum of the attributes x and y. ii. Write a class method called multiply, which takes a single number parameter a and returns the product of a and MULTIPLIER. iii. Write a static method called subtract, which takes two number parameters, b and c, and returns b - c. iv. Write a method called value which returns a tuple containing the values of x and y. Make this method into a property, and write a setter and a deleter for manipulating the values of x and y. 8. Write the program for the following: Open a new file in IDLE ("New Window" in the "File" menu) and save it as geometry.py in the directory where you keep the files you create for this course. Then copy the functions you wrote for calculating volumes and areas in the "Control Flow and Functions" exercise into this file and save it. Now open a new file and save it in the same directory. You should now be able to import your own module like this: import geometry

	Try and add print dir(geometry) to the file and run it. Now write a function pointyShapeVolume(x, y, squareBase) that calculates the volume of a square pyramid if squareBase is True and of a right circular cone if
	squareBase is False. x is the length of an edge on a square if squareBase is True
	and the radius of a circle when squareBase is False. y is the height of the object. First use squareBase to distinguish the cases. Use the circleArea and squareArea
	from the geometry module to calculate the base areas.
b.	Write a program to implement exception handling.
9.	Write the program for the following:
a.	Try to configure the widget with various options like: bg="red", family="times", size=18
b.	Try to change the widget type and configuration options to experiment with other widget types like Message, Button, Entry, Checkbutton, Radiobutton, Scale etc.
10.	Design the database applications for the following:
a.	Design a simple database application that stores the records and retrieve the
	same.
b.	Design a database application to search the specified record from the database.
c.	Design a database application to that allows the user to add, delete and modify the records.

List of	Practical
1.	Implement the following:
a.	Write a program to store the elements in 1-D array and perform the operations like
	searching, sorting and reversing the elements. [Menu Driven]
b.	Read the two arrays from the user and merge them and display the elements in sorted order.[Menu Driven]
c.	Write a program to perform the Matrix addition, Multiplication and Transpose Operation. [Menu Driven]
2.	Implement the following for Linked List:
a.	Write a program to create a single linked list and display the node elements in
	reverse order.
b.	Write a program to search the elements in the linked list and display the same
c.	Write a program to create double linked list and sort the elements in the linked list.
_	
3.	Implement the following for Stack:
a.	Write a program to implement the concept of Stack with Push, Pop, Display and Exit operations.
b.	Write a program to convert an infix expression to postfix and prefix conversion.
c.	Write a program to implement Tower of Hanoi problem.
4	
4.	Implement the following for Queue:
a.	Write a program to implement the concept of Queue with Insert, Delete, Display and Exit operations.
b.	Write a program to implement the concept of Circular Queue
c.	Write a program to implement the concept of Deque.
5.	Implement the following sorting techniques:
a.	Write a program to implement bubble sort.
b.	Write a program to implement selection sort.
c.	Write a program to implement insertion sort.
6.	Implement the following data structure techniques:
a.	Write a program to implement merge sort.
b.	Write a program to implement merge sort. Write a program to search the element using sequential search.
c.	Write a program to search the element using binary search.
	The second of th

7.	Implement the following data structure techniques:
a.	Write a program to create the tree and display the elements.
b.	Write a program to construct the binary tree.
c.	Write a program for inorder, postorder and preorder traversal of tree
8.	Implement the following data structure techniques:
a.	Write a program to insert the element into maximum heap.
b.	Write a program to insert the element into minimum heap.
9.	Implement the following data structure techniques:
a.	Write a program to implement the collision technique.
b.	Write a program to implement the concept of linear probing.
10.	Implement the following data structure techniques:
a.	Write a program to generate the adjacency matrix.
b.	Write a program for shortest path diagram.

1.	IPv4 Addressing and Subnetting
	a) Given an IP address and network mask, determine other information about the
	IP address such as:
	 Network address
	 Network broadcast address
	 Total number of host bits
	 Number of hosts
	b) Given an IP address and network mask, determine other information about the
	IP address such as:
	 The subnet address of this subnet
	 The broadcast address of this subnet
	 The range of host addresses for this subnet
	 The maximum number of subnets for this subnet mask
	 The number of hosts for each subnet
	 The number of subnet bits
	The number of this subnet
2.	Use of ping and tracert / traceroute, ipconfig / ifconfig, route and arp utilities.
3.	Configure IP static routing.
4.	Configure IP routing using RIP.
	Configurate Cineda OCDE
5.	Configuring Simple OSPF. Configuring DHCP server and client.
6.	Create virtual PC based network using virtualization software and virtual NIC.
7. 8.	Configuring DNS Server and client.
9.	Configuring OSPF with multiple areas.
10.	Use of Wireshark to scan and check the packet information of following protocols
10.	HTTP
	• ICMP
	• TCP
	• SMTP
	• POP3
	- 1013

B. Sc. (Information Tecl	Semester – III		
Course Name: Database Management System			ode: USIT3P4
Periods per week (1 Period is 50	minutes)	3	
Credits		2	
		Hours	Marks
Evaluation System Practical Examination		21/2	50
	Internal		

List of	Practical
1.	SQL Statements – 1
a.	Writing Basic SQL SELECT Statements
b.	Restricting and Sorting Data
c.	Single-Row Functions
2.	SQL Statements – 2
a.	Displaying Data from Multiple Tables
b.	Aggregating Data Using Group Functions
c.	Subqueries
3.	Manipulating Data
a.	Using INSERT statement
b.	Using DELETE statement
c.	Using UPDATE statement
4.	Creating and Managing Tables
a.	Creating and Managing Tables
b.	Including Constraints
5.	Creating and Managing other database objects
a.	Creating Views
b.	Other Database Objects
c.	Controlling User Access
	Controlling Cast Freeday
6.	Using SET operators, Date/Time Functions, GROUP BY clause (advanced
	features) and advanced subqueries
a.	Using SET Operators
b.	Datetime Functions
c.	Enhancements to the GROUP BY Clause
d.	Advanced Subqueries
7.	PL/SQL Basics
a.	Declaring Variables
b.	Writing Executable Statements
c.	Interacting with the Oracle Server
d.	Writing Control Structures

8.	Composite data types, cursors and exceptions.
a.	Working with Composite Data Types
b.	Writing Explicit Cursors
c.	Handling Exceptions
9.	Procedures and Functions
a.	Creating Procedures
b.	Creating Functions
c.	Managing Subprograms
d.	Creating Packages
10.	Creating Database Triggers

Unit	Details	Lectures
I	Introduction: History, architecture and its components, Java Class	
	File, Java Runtime Environment, The Java Virtual Machine, JVM	
	Components, The Java API, java platform, java development kit,	
	Lambda Expressions, Methods References, Type Annotations, Method	
	Parameter Reflection, setting the path environment variable, Java	
	Compiler And Interpreter, java programs, java applications, main(),	
	public, static, void, string[] args, statements, white space, case	12
	sensitivity, identifiers, keywords, comments, braces and code blocks,	
	variables, variable name	
	Data types: primitive data types, Object Reference Types, Strings,	
	Auto boxing, operators and properties of operators, Arithmetic	
	operators, assignment operators, increment and decrement operator,	
	relational operator, logical operator, bitwise operator, conditional	
***	operator.	
II	Control Flow Statements: The IfElse IfElse Statement, The	
	SwitchCase Statement The While Learn The Day, While Learn The For Learn	
	Iterations: The While Loop, The Do While Loop, The For Loop, The Foreach Loop, Labeled Statements, The Break And Continue	
	Statements, The Return Statement	
	Classes: Types of Classes, Scope Rules, Access Modifier, Instantiating	
	Objects From A Class, Initializing The Class Object And Its Attributes,	12
	Class Methods, Accessing A Method, Method Returning A Value,	
	Method's Arguments, Method Overloading, Variable Arguments	
	[Varargs], Constructors, this Instance, super Instance, Characteristics	
	Of Members Of A Class, constants, this instance, static fields of a class,	
	static methods of a class, garbage collection.	
III	Inheritance: Derived Class Objects, Inheritance and Access Control,	
	Default Base Class Constructors, this and super keywords.	
	Abstract Classes And Interfaces, Abstract Classes, Abstract Methods,	
	Interfaces, What Is An Interface? How Is An Interface Different From	
	An Abstract Class?, Multiple Inheritance, Default Implementation,	12
	Adding New Functionality, Method Implementation, Classes V/s	
	Interfaces, Defining An Interface, Implementing Interfaces.	
	Packages: Creating Packages, Default Package, Importing Packages,	
	Using A Package.	

IV	Enumerations, Arrays: Two Dimensional Arrays, Multi-Dimensional	
	Arrays, Vectors, Adding Elements To A Vector, Accessing Vector	
	Elements, Searching For Elements In A Vector, Working With The Size	
	of The Vector.	
	Multithreading: the thread control methods, thread life cycle, the main	
	thread, creating a thread, extending the thread class.	12
	Exceptions: Catching Java Exceptions, Catching Run-Time	14
	Exceptions, Handling Multiple Exceptions, The finally Clause, The	
	throws Clause	
	Byte streams: reading console input, writing console output, reading	
	file, writing file, writing binary data, reading binary data, getting started	
	with character streams, writing file, reading file	
V	Event Handling: Delegation Event Model, Events, Event classes,	
	Event listener interfaces, Using delegation event model, adapter classes	
	and inner classes.	
	Abstract Window Toolkit: Window Fundamentals, Component,	12
	Container, Panel, Window, Frame, Canvas. Components - Labels,	12
	Buttons, Check Boxes, Radio Buttons, Choice Menus, Text Fields,	
	Text, Scrolling List, Scrollbars, Panels, Frames	
	Layouts: Flow Layout, Grid Layout, Border Layout, Card Layout.

Introduction: Embedded Systems and general purpose computer systems, history, classifications, applications and purpose of embedded systems: Core of embedded systems: microprocessors and microcontrollers, RISC and CISC controllers, Big endian and Little endian processors, Application specific ICs, Programmable logic devices, COTS, sensors and actuators, communication interface, embedded firmware, other system components. Characteristics and quality attributes of embedded systems: Characteristics, operational and non-operational quality attributes. II Embedded Systems – Application and Domain Specific: Application specific – washing machine, domain specific - automotive. Embedded Hardware: Memory map, i/o map, interrupt map, processor family, external peripherals, memory – RAM, ROM, types of RAM and ROM, memory testing, CRC, Flash memory. Peripherals: Control and Status Registers, Device Driver, Timer Driver - Watchdog Timers. III The 8051 Microcontrollers: Microcontrollers and Embedded processors, Overview of 8051 family. 8051 Microcontroller hardware, Input/output pins, Ports, and Circuits, External Memory. 8051 Programming in C: Data Types and time delay in 8051 Microcontroller: Factors to be considered in selecting a controller, why 8051 Microcontroller, Designing with 8051. Programming embedded System with 8051 Microcontroller: Factors to be considered in selecting a controller, why 8051 Microcontroller, Designing with 8051. Programming embedded systems: structure of embedded program, infinite loop, compiling, linking and debugging. V Real Time Operating System (RTOS): Operating system basics, types of operating systems, Real-Time Characteristics, Selection Process of an RTOS. Design and Development: Embedded system development Environment – IDE, types of file generated on cross compilation, disassembler/ de-compiler, simulator, emulator and debugging, embedded product development life-cycle, trends in embedded	Unit	Details	Lectures

Programming embedded systems: structure of embedded program, infinite loop, compiling, linking and debugging. V Real Time Operating System (RTOS): Operating system basics, types of operating systems, Real-Time Characteristics, Selection Process of an RTOS. Design and Development: Embedded system development Environment – IDE, types of file generated on cross compilation, disassembler/ de-compiler, simulator, emulator and debugging,			
specific – washing machine, domain specific - automotive. Embedded Hardware: Memory map, i/o map, interrupt map, processor family, external peripherals, memory – RAM, ROM, types of RAM and ROM, memory testing, CRC, Flash memory. Peripherals: Control and Status Registers, Device Driver, Timer Driver - Watchdog Timers. III The 8051 Microcontrollers: Microcontrollers and Embedded processors, Overview of 8051 family. 8051 Microcontroller hardware, Input/output pins, Ports, and Circuits, External Memory. 8051 Programming in C: Data Types and time delay in 8051 C, I/O Programming, Logic operations, Data conversion Programs. IV Designing Embedded System with 8051 Microcontroller: Factors to be considered in selecting a controller, why 8051 Microcontroller, Designing with 8051. Programming embedded systems: structure of embedded program, infinite loop, compiling, linking and debugging. V Real Time Operating System (RTOS): Operating system basics, types of operating systems, Real-Time Characteristics, Selection Process of an RTOS. Design and Development: Embedded system development Environment – IDE, types of file generated on cross compilation, disassembler/ de-compiler, simulator, emulator and debugging,			
Embedded Hardware: Memory map, i/o map, interrupt map, processor family, external peripherals, memory — RAM, ROM, types of RAM and ROM, memory testing, CRC, Flash memory. Peripherals: Control and Status Registers, Device Driver, Timer Driver - Watchdog Timers. III The 8051 Microcontrollers: Microcontrollers and Embedded processors, Overview of 8051 family. 8051 Microcontroller hardware, Input/output pins, Ports, and Circuits, External Memory. 8051 Programming in C: Data Types and time delay in 8051 C, I/O Programming, Logic operations, Data conversion Programs. IV Designing Embedded System with 8051 Microcontroller: Factors to be considered in selecting a controller, why 8051 Microcontroller, Designing with 8051. I	The Mean, Median, Mode, and Other Measures of Central	
1	Tendency: Index, or Subscript, Notation, Summation Notation, Averages, or Measures of Central Tendency, The Arithmetic Mean, The Weighted Arithmetic Mean ,Properties of the Arithmetic Mean, The Arithmetic Mean Computed from Grouped Data, The Median, The Mode, The Empirical Relation Between the Mean, Median, and Mode, The Geometric Mean G, The Harmonic Mean H, The Relation Between the Arithmetic, Geometric, and Harmonic Means, The Root Mean Square, Quartiles, Deciles, and Percentiles, Software and Measures of Central Tendency. The Standard Deviation and Other Measures of Dispersion: Dispersion, or Variation, The Range, The Mean Deviation, The Semi-Interquartile Range, The 10–90 Percentile Range, The Standard Deviation, The Variance, Short Methods for Computing the Standard Deviation, Properties of the Standard Deviation, Charlie's Check, Sheppard's Correction for Variance, Empirical Relations Between Measures of Dispersion, Absolute and Relative Dispersion; Coefficient of Variation, Standardized Variable; Standard Scores, Software and Measures of Dispersion. Introduction to R: Basic syntax, data types, variables, operators, control statements, R-functions, R –Vectors, R – lists, R Arrays.	12
II	Moments, Skewness, and Kurtosis: Moments, Moments for Grouped Data, Relations Between Moments, Computation of Moments for Grouped Data, Charlie's Check and Sheppard's Corrections, Moments in Dimensionless Form, Skewness, Kurtosis, Population Moments, Skewness, and Kurtosis, Software Computation of Skewness and Kurtosis. Elementary Probability Theory: Definitions of Probability, Conditional Probability; Independent and Dependent Events, Mutually Exclusive Events, Probability Distributions, Mathematical Expectation, Relation Between Population, Sample Mean, and Variance, Combinatorial Analysis, Combinations, Stirling's Approximation to n!, Relation of Probability to Point Set Theory, Euler or Venn Diagrams and Probability. Elementary Sampling Theory: Sampling Theory, Random Samples and Random Numbers, Sampling With and Without Replacement,	12

	Sampling Distributions, Sampling Distribution of Means, Sampling Distribution of Proportions, Sampling Distributions of Differences and Sums, Standard Errors, Software Demonstration of Elementary Sampling Theory.	
III	Statistical Estimation Theory: Estimation of Parameters, Unbiased Estimates, Efficient Estimates, Point Estimates and Interval Estimates; Their Reliability, Confidence-Interval Estimates of Population Parameters, Probable Error. Statistical Decision Theory: Statistical Decisions, Statistical Hypotheses, Tests of Hypotheses and Significance, or Decision Rules, Type I and Type II Errors, Level of Significance, Tests Involving Normal Distributions, Two-Tailed and One-Tailed Tests, Special Tests, Operating-Characteristic Curves; the Power of a Test, p-Values for Hypotheses Tests, Control Charts, Tests Involving Sample Differences, Tests Involving Binomial Distributions. Statistics in R: mean, median, mode, Normal Distribution, Binomial Distribution, Frequency Distribution in R.	12
IV	Small Sampling Theory: Small Samples, Student's t Distribution, Confidence Intervals, Tests of Hypotheses and Significance, The Chi-Square Distribution, Confidence Intervals for Sigma, Degrees of Freedom, The F Distribution. The Chi-Square Test: Observed and Theoretical Frequencies, Definition of chi-square, Significance Tests, The Chi-Square Test for Goodness of Fit, Contingency Tables, Yates' Correction for Continuity, Simple Formulas for Computing chi-square, Coefficient of Contingency, Correlation of Attributes, Additive Property of chi-square.	12
V	Curve Fitting and the Method of Least Squares: Relationship Between Variables, Curve Fitting, Equations of Approximating Curves, Freehand Method of Curve Fitting, The Straight Line, The Method of Least Squares, The Least-Squares Line, Nonlinear Relationships, The Least-Squares Parabola, Regression, Applications to Time Series, Problems Involving More Than Two Variables. Correlation Theory: Correlation and Regression, Linear Correlation, Measures of Correlation, The Least-Squares Regression Lines, Standard Error of Estimate, Explained and Unexplained Variation, Coefficient of Correlation, Remarks Concerning the Correlation Coefficient, Product-Moment Formula for the Linear Correlation Coefficient, Short Computational Formulas, Regression Lines and the Linear Correlation Coefficient, Correlation of Time Series, Correlation of Attributes, Sampling Theory of Correlation, Sampling Theory of Regression.	12

Unit	Details	Lectures
I	Introduction: What is software engineering? Software Development Life Cycle, Requirements Analysis, Software Design, Coding, Testing, Maintenance etc. Software Requirements: Functional and Non-functional requirements, User Requirements, System Requirements, Interface Specification, Documentation of the software requirements. Software Processes: Process and Project, Component Software Processes. Software Development Process Models. • Waterfall Model. • Prototyping. • Iterative Development. • Rational Unified Process. • The RAD Model • Time boxing Model. Agile software development: Agile methods, Plan-driven and agile development, Extreme programming, Agile project management, Scaling agile methods.	12
II	Socio-technical system: Essential characteristics of socio technical systems, Emergent System Properties, Systems Engineering, Components of system such as organization, people and computers, Dealing Legacy Systems. Critical system: Types of critical system, A simple safety critical system, Dependability of a system, Availability and Reliability, Safety and Security of Software systems. Requirements Engineering Processes: Feasibility study, Requirements elicitation and analysis, Requirements Validations, Requirements Management. System Models: Models and its types, Context Models, Behavioural Models, Data Models, Object Models, Structured Methods.	12
III	Architectural Design: Architectural Design Decisions, System Organisation, Modular Decomposition Styles, Control Styles, Reference Architectures.	12

	User Interface Design: Need of UI design, Design issues, The UI	
	design Process, User analysis, User Interface Prototyping, Interface	
	Evaluation.	
	Project Management	
	Software Project Management, Management activities, Project	
	Planning, Project Scheduling, Risk Management.	
	Quality Management: Process and Product Quality, Quality assurance	
	and Standards, Quality Planning, Quality Control, Software	
	Measurement and Metrics.	
IV	Verification and Validation: Planning Verification and Validation,	
	Software Inspections, Automated Static Analysis, Verification and	
	Formal Methods. Software Testing: System Testing, Component	
	Testing, Test Case Design, Test Automation.	
	Software Measurement: Size-Oriented Metrics, Function-Oriented	12
	Metrics, Extended Function Point Metrics	
	Software Cost Estimation: Software Productivity, Estimation	
	Techniques, Algorithmic Cost Modelling, Project Duration and	
	Staffing	
V	Process Improvement: Process and product quality, Process	
	Classification, Process Measurement, Process Analysis and Modeling,	
	Process Change, The CMMI Process Improvement Framework.	
	Service Oriented Software Engineering: Services as reusable	
	components,	
	Service Engineering, Software Development with Services.	12
	Software reuse: The reuse landscape, Application frameworks,	
	Software product lines, COTS product reuse.	
	Distributed software engineering : Distributed systems issues, Client–	
	server computing, Architectural patterns for distributed systems,	
	Software as a service

Unit	Details	Lectures
I	Introduction to Computer Graphics:	
	Overview of Computer Graphics, Computer Graphics Application and	
	Software, Description of some graphics devices, Input Devices for	
	Operator Interaction, Active and Passive Graphics Devices, Display	
	Technologies, Storage Tube Graphics Displays, Calligraphic Refresh	
	Graphics Displays, Raster Refresh (Raster-Scan) Graphics Displays,	
	Cathode Ray Tube Basics, Color CRT Raster Scan Basics, Video	
	Basics, The Video Controller, Random-Scan Display Processor, LCD displays.	12
	Scan conversion – Digital Differential Analyzer (DDA) algorithm,	
	Bresenhams' Line drawing algorithm. Bresenhams' method of Circle	
	drawing, Midpoint Circle Algorithm, Midpoint Ellipse Algorithm,	
	Mid-point criteria, Problems of Aliasing, end-point ordering and	
	clipping lines, Scan Converting Circles, Clipping Lines algorithms—	
	Cyrus-Beck, Cohen-Sutherland and Liang-Barsky, Clipping Polygons,	
TT	problem with multiple components.	
II	Two-Dimensional Transformations:	
	Transformations and Matrices, Transformation Conventions, 2D Transformations, Homogeneous Coordinates and Matrix	
	Representation of 2D Transformations, Translations and Homogeneous	
	Coordinates, Rotation, Reflection, Scaling, Combined Transformation,	
	Transformation of Points, Transformation of The Unit Square, Solid	
	Body Transformations, Rotation About an Arbitrary Point, Reflection	
	through an Arbitrary Line, A Geometric Interpretation of	
	Homogeneous Coordinates, The Window-to-Viewport	
	Transformations.	
	Three-Dimensional Transformations:	12
	Three-Dimensional Scaling, Three-Dimensional Shearing, Three-	
	Dimensional Rotation, Three-Dimensional Reflection, Three-	
	Dimensional Translation, Multiple Transformation, Rotation about an	
	Arbitrary Axis in Space, Reflection through an Arbitrary Plane, Matrix	
	Representation of 3D Transformations, Composition of 3D	
	Transformations, Affine and Perspective Geometry, Perspective	
	Transformations, Techniques for Generating Perspective Views,	
	Vanishing Points, the Perspective Geometry and camera models,	
	Orthographic Projections, Axonometric Projections, Oblique	
	Projections, View volumes for projections.	

III	Viewing in 3D Stages in 3D viewing, Canonical View Volume (CVV), Specifying an Arbitrary 3D View, Examples of 3D Viewing, The Mathematics of Planar Geometric Projections, Combined transformation matrices for projections and viewing, Coordinate Systems and matrices, camera model and viewing pyramid. Light: Radiometry, Transport, Equation, Photometry Color: Colorimetry, Color Spaces, Chromatic Adaptation, Color Appearance	12
IV	Visible-Surface Determination: Techniques for efficient Visible-Surface Algorithms, Categories of algorithms, Back face removal, The z-Buffer Algorithm, Scan-line method, Painter's algorithms (depth sorting), Area sub-division method, BSP trees, Visible-Surface Ray Tracing, comparison of the methods. Plane Curves and Surfaces: Curve Representation, Nonparametric Curves, Parametric Representation of a Circle, Parametric Representation of an Ellipse, Parametric Representation of a Parabola, Parametric Representation of a Hyperbola, Representation of Space Curves, Cubic Splines, , Bezier Curves, B-spline Curves, B-spline Curve Fit, B-spline Curve Subdivision, Parametric Cubic Curves, Quadric Surfaces. Bezier Surfaces.	12
V	Computer Animation: Principles of Animation, Key framing, Deformations, Character Animation, Physics-Based Animation, Procedural Techniques, Groups of Objects. Image Manipulation and Storage: What is an Image? Digital image file formats, Image compression standard — JPEG, Image Processing - Digital image enhancement, contrast stretching, Histogram Equalization, smoothing and median Filtering.	12

B. Sc. (Information Technology)		Semester –IV	
Course Name: Core Java Practical		Course Code: USIT4P1	
Periods per week	Lectures per week	3	
1 Period is 50 minutes	_		
·		Hours	Marks
Evaluation System	Practical Examination	2½ 50	
-			

List of	Practical
1.	Java Basics
a.	Write a Java program that takes a number as input and prints its multiplication table
	upto 10.
b.	Write a Java program to display the following pattern.

	**
	*
c.	Write a Java program to print the area and perimeter of a circle.
2.	Use of Operators
a.	Write a Java program to add two binary numbers.
b.	Write a Java program to convert a decimal number to binary number and vice versa.
c.	Write a Java program to reverse a string.
3.	Java Data Types
a.	Write a Java program to count the letters, spaces, numbers and other characters of
	an input string.
b.	Implement a Java function that calculates the sum of digits for a given char array
	consisting of the digits '0' to '9'. The function should return the digit sum as a long
	value.
c.	Find the smallest and largest element from the array
4.	Methods and Constructors
a.	Designed a class SortData that contains the method asec() and desc().
b.	Designed a class that demonstrates the use of constructor and destructor.
c.	Write a java program to demonstrate the implementation of abstract class.
5.	Inheritance
a.	Write a java program to implement single level inheritance.
b.	Write a java program to implement method overriding
c.	Write a java program to implement multiple inheritance.

6.	Packages and Arrays
a.	Create a package, Add the necessary classes and import the package in java class.
b.	Write a java program to add two matrices and print the resultant matrix.
C.	Write a java program for multiplying two matrices and print the product for the same.
7.	Vectors and Multithreading
a.	Write a java program to implement the vectors.
b.	Write a java program to implement thread life cycle.
c.	Write a java program to implement multithreading.
8.	File Handling
a.	Write a java program to open a file and display the contents in the console window.
b.	Write a java program to copy the contents from one file to other file.
c.	Write a java program to read the student data from user and store it in the file.
9.	GUI and Exception Handling
a.	Design a AWT program to print the factorial for an input value.
b.	Design an AWT program to perform various string operations like reverse string, string concatenation etc.
c.	Write a java program to implement exception handling.
10.	GUI Programming.
a.	Design an AWT application that contains the interface to add student information and display the same.
b.	Design a calculator based on AWT application.
c.	Design an AWT application to generate result marks sheet.

Evaluation System	Practical Examination	21/2	50	

List of P	ractical
1.	Design and develop a reprogrammable embedded computer using 8051
	microcontrollers and to show the following aspects.
	a. Programming
	b. Execution
	c. Debugging
2. A	Configure timer control registers of 8051 and develop a program to generate given time delay.
В	
-	controllers for data transfer between them.
3. A	Port I / O: Use one of the four ports of 8051 for O/P interfaced to eight LED's. Simulate binary counter (8 bit) on LED's
B	To interface 8 LEDs at Input-output port and create different patterns.
C	To demonstrate timer working in timer mode and blink LED without using any loop delay routine.
	loop delay rounie.
4 A	Serial I / O: Configure 8051 serial port for asynchronous serial communication
	with serial port of PC exchange text messages to PC and display on PC screen.
	Signify end of message by carriage return.
В	
	from 0 to 99 with fixed time delay.
C	Interface 8051 with D/A converter and generate square wave of given frequency on oscilloscope.
5. A	Interface 8051 with D/A converter and generate triangular wave of given
	frequency on oscilloscope.
В	Using D/A converter generate sine wave on oscilloscope with the help of lookup table stored in data area of 8051.
6.	Interface stepper motor with 8051 and write a program to move the motor through
υ.	a given angle in clock wise or counter clock wise direction.
	•

7.	Generate traffic signal.
8.	Implement Temperature controller.
9.	Implement Elevator control.
10.	Using FlashMagic
A	To demonstrate the procedure for flash programming for reprogrammable
	embedded system board using FlashMagic
В	To demonstrate the procedure and connections for multiple controllers
	programming of same type of controller with same source code in one go, using
	flash magic.

B. Sc. (Information Technology)			Semester – IV	
Course Name: Computer Orient Techniques Practical	Course Code: USIT4P3			
Periods per week 1 Period is 50 minutes	Lectures per week	3		
		Hours	Marks	
Evaluation System	Practical Examination	21/2	50	

List of I	Practical
1.	Using R execute the basic commands, array, list and frames.
2.	Create a Matrix using R and Perform the operations addition, inverse, transpose and multiplication operations.
2	Heima D. Francisco de la defectional francisco de la management de la mana
3.	Using R Execute the statistical functions: mean, median, mode, quartiles, range, inter quartile range histogram
4	
4.	Using R import the data from Excel / .CSV file and Perform the above functions.
	Y Discourse of the Control of the Co
5.	Using R import the data from Excel / .CSV file and Calculate the standard
	deviation, variance, co-variance.
6	Using R import the data from Excel / .CSV file and draw the skewness.
6.	Oshig K import the data from Excer/ Sv The and draw the skewness.
7.	Import the data from Excel / .CSV and perform the hypothetical testing.
8.	Import the data from Excel / .CSV and perform the Chi-squared Test.
0.	import the data from Exect / .ess v and perform the em squared rest.
9.	Using R perform the binomial and normal distribution on the data.
10.	Perform the Linear Regression using R.
11.	Compute the Least squares means using R.
12.	Compute the Linear Least Square Regression

	Hours	Marks		
Evaluation System	Practical Examination	21/2	50	

List of I	Practical (To be executed using Star UML or any similar software)
1.	Study and implementation of class diagrams.
2.	Study and implementation of Use Case Diagrams.
3.	Study and implementation of Entity Relationship Diagrams.
4.	Study and implementation of Sequence Diagrams.
5.	Study and implementation of State Transition Diagrams.
6.	Study and implementation of Data Flow Diagrams.
7.	Study and implementation of Collaboration Diagrams.
8.	Study and implementation of Activity Diagrams.
9.	Study and implementation of Component Diagrams.
10.	Study and implementation of Deployment Diagrams.

B. Sc. (Information Technology)		Semester – IV		
Course Name: Computer Graphics and Animation		Course Code: USIT4P5		
Periods per week 1 Period is 50 minutes	Lectures per week	3		
		Hours	Marks	
Evaluation System	Practical Examination	21/2	50	

List of I	Practical		
1.	Solve the following:		
a.	Study and enlist the basic functions used for graphics in C / C++ / Python language.		
	Give an example for each of them.		
b.	Draw a co-ordinate axis at the center of the screen.		
2.	Solve the following:		
a.	Divide your screen into four region, draw circle, rectangle, ellipse and half ellipse		
	in each region with appropriate message.		
b.	Draw a simple hut on the screen.		
3.	Draw the following basic shapes in the center of the screen:		
	i. Circle ii. Rectangle iii. Square iv. Concentric Circles v. Ellipse vi. Line		
4.	Solve the following:		
a.	Develop the program for DDA Line drawing algorithm.		
b.	Develop the program for Bresenham's Line drawing algorithm.		
5.	Solve the following:		
a.	Develop the program for the mid-point circle drawing algorithm.		
b.	Develop the program for the mid-point ellipse drawing algorithm.		
(Calve the fallerings		
6.	Solve the following:		
a.	Write a program to implement 2D scaling.		
b.	Write a program to perform 2D translation		
7.	Solve the following:		
a.	Perform 2D Rotation on a given object.		
b.	Program to create a house like figure and perform the following operations.		
	i. Scaling about the origin followed by translation.		
	ii. Scaling with reference to an arbitrary point.		
	iii. Reflect about the line $y = mx + c$.		

8.	Solve the following:			
a.	Write a program to implement Cohen-Sutherland clipping.			
b.	Write a program to implement Liang - Barsky Line Clipping Algorithm			
9.	Solve the following:			
a.	Write a program to fill a circle using Flood Fill Algorithm.			
b.	Write a program to fill a circle using Boundary Fill Algorithm.			
10.	Solve the following:			
a.	Develop a simple text screen saver using graphics functions.			
b.	Perform smiling face animation using graphic functions.			
c.	Draw the moving car on the screen.
